

Konfort 700 Series

Automated Recovery / Recycle Unit

From the 1st January 2011 all newly approved cars under the EEC legislation should use the new refrigerant R1234yf in their AC system. This new gas, has lower environmental impact, and will progressively replace the traditional R134a. Due to this long term change over, there will be a long period where technicians will deal with both types of refrigerants.

JAVAC's latest innovation, the Konfort 700R Series, will allow workshops to purchase a professional A/C service station that will give them the capability to easily deal with both refrigerants without the excessive cost of ownership.

The Konfort 720R 2 gas ready unit comes with automatic functions for the recovery and recycling of refrigerant and the recovery of oil.

The quantities of oil and UV tracer are controlled by an automatic valve, leaving the operator just a few simple manual operations.

The KONFORT 720R can also be purchased pre-configured for either type of refrigerant, but provides numerous additional features for the more demanding mechanic and is fully automatic to minimise the time taken by the mechanic.

Konfort 720R Main Features:

- Compatible with R134a or R1234yf
- High visibility backlit Blue LCD display
- Rotating gauges and display
- 12kg internal tank
- Dual stage vacuum pump

The 760R model is equipped with a high visibility colour TFT display, and an easy to understand user interface. All the service functions are fully automated.

Konfort 760R Main Features:

- Compatible with R134a or R1234yf
- High efficiency refrigerant recovery (over 95%)
- High visibility colour TFT Display
- Revolutionary graphic interface
- Rotating gauges and display
- Scale locking system
- Sealed anti contamination oil bottles
- Automatic oil bottle recognition
- Automatic refrigerant measurement accuracy check
- Automatic oil injection / Dye
- DATABASE management and services carried out via SD card
- Rotating gauges and display
- Automatic service management
- 20kg internal tank
- Dual stage vacuum pump

Optional:

- Climate control efficiency check kit
- Thermal printer
- VDC kit for variable compressors system check
- Professional flushing kit for AC systems
- Hose length extension kit
- R143a-R1234yf retrofit kit
